

You can't put a number on peace of mind.  
 You can't put a value on protection.  
 However, \$22 billion is a pretty impressive number.

### Quality of Life...Insurance

is so innovative and intelligent that over 180,000 people have purchased \$22 billion of protection in just over four years.

Imagine a young mother who receives 80 percent of her life insurance benefit\* after she is diagnosed with invasive breast cancer. This money allows her to afford top-quality medical care and take care of her family in a way she never thought possible.

Quality of Life...Insurance is an affordable, flexible and more useful approach to what

today's families need. It's innovative coverage that can help in case of a heart attack, stroke or invasive cancer. It's life insurance you don't have to die to use.
